

## A note on this list of names

This list of 2529 names has been produced for those campaigning for an immediate ceasefire in Israel-Palestine, for use in public readings of the names of children who have been killed in Israel's current attack on Gaza or were killed in Hamas's attack on Israel on 7 October 2023.

It has been compiled from three sources:

> a spreadsheet of names of people killed in Gaza since 7 October 2023, circulated by Iraq Body Count: <https://twitter.com/iraqbodycount/status/1718078237312483656>. This in turn was compiled from 'all the names of the killed from the #Gaza Health Ministry list as recorded up to Oct 26 and have created a spreadsheet with ChatGPT transliterations of the Arabic names for English-speakers.'

> These two articles from the BBC and Times of Israel respectively:

<https://www.bbc.co.uk/news/world-middle-east-67206277> and

<https://www.timesofisrael.com/always-the-first-to-defend-the-israelis-slain-in-hamass-surprise-onslaught/>

The list below consists solely of people listed or reported as being sixteen years or younger at the time that they were killed. It consists of the names of 2523 children killed by Israel's current attack on Gaza and six children killed in the Hamas attack on Israel on 7 October 2023.

It is not – and does not pretend to be – a comprehensive list of all children killed in Israel-Palestine since 7 October 2023. (According to Save the Children on 29 October: 'Since October 7, more than 3,257 children have been reported killed [in Israel-Palestine], including at least 3195 in Gaza, 33 in the West Bank, and 29 in Israel, according to the Ministries of Health in Gaza and Israel respectively.': <https://www.savethechildren.org.uk/news/media-centre/press-releases/gaza-childrens-deaths-in-last-three-weeks-surpasses-total-child->.)

Regarding the credibility of the list provided by the Gaza Health Ministry, Time Magazine notes that:

*News outlets and international organizations and agencies have long relied on Israeli and Palestinian government sources for casualty figures. While they do so partly because they are unable to independently verify these figures themselves, it's also because these statistics have proven accurate in the past. "They have access methodologically to sources of information that nobody else has—access to data from morgues, from hospitals—and that's ultimately going to be the most reliable way to count casualties," Omar Shakir, the Israel and Palestine director at Human Rights Watch, says of Palestinian health officials in Gaza. He notes that when Human Rights Watch has conducted its own investigations into individual strikes, "there have been no large discrepancies between those numbers and the numbers produced by the Gaza health ministry."*
